without making phone calls or writing emails, as the application can be used by the entire team.

SAVE UP TO 80% OF YOUR TIME

thanks to fast and automatic generation of documents and streamlining of administrative work.

CREATE DIGITAL DOCUMENTATION

deliver plans, projects and reports to contractors, the management and team members.

# Snag Management and Recording on multiple sites

## CONSTRUCTION SITE MANAGEMENT

Pocket Inspections is an application intended for developers, site engineers, contractors and investors.

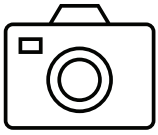

### WHAT IS POCKET INSPECTIONS?

Pocket Inspections is a mobile and web application that makes any engineer's everyday work much easier. Allows a team to easily, quickly and remotely:

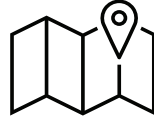

- Generate snag lists for employees/subcontractors, project managers and client
- Have faults corrected
- Assign tasks
- Prepare documentation
- Supervise the work on site

## Pocket Inspection App

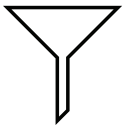

Pocket Inspections is a mobile application for managing snags on all construction sites.

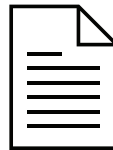

Take photos of the snags, place it in the application and automatically link to the project

Upload the construction plan in PDF or JPG format and mark the locations to which the photos and notes refer

Filter jobs by status, contractor, creation date and other selected parameters

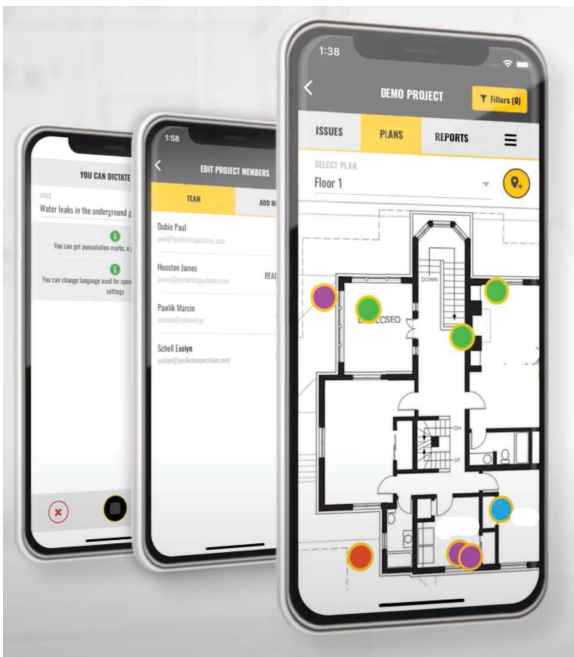

Automatically create reports containing notes, photos and marked locations in PDF, DOC and XLS formats

This system removes the need to manually record snags on the Master Snag list and will allow the site team to issue individual or multiple snags to individuals or contractors through mail or app.

### THE CHALLENGE

Managing snag recording and resolution on multiple sites and locations.

### THE POCKET APP SOLUTIONS & BENEFITS

- Automatically draft reports and documentation on the implementation of building plans and specifications for subcontractors, the project managers and the client, both official and internal.
- Efficiently delegate tasks or repairs to team members.
- Easily supervise the work of subcontractors without personally attending the building site,
- Mark the location of defects on the investment plan, automatically attach photos and speech-to-text notes.
- Remain in contact with the entire team, even when offline.
- As a web-based application it enables work on plans and specifications both using a mobile device and a desktop.
